# 2009 - 2026

## 17 Years Leading Global Yacht Transformation

Founded in 2009, Marine Wrapping International LLC boasts over 16 years of unparalleled experience in the nautical sector, consolidating our leadership in the comprehensive wrapping and refitting of yachts and superyachts.

Our trajectory positions us as a worldwide benchmark company, offering the perfect fusion of innovative, precise, and sustainable solutions for the transformation, protection, and customization of vessels regardless of their length.

**Key Competitive Advantage:** We operate with an in-house team of highly certified installers, who are high-level global specialist collaborators. This model guarantees uniform quality, absolute confidentiality (NDA), and the strict adherence to deadlines on every project. We execute with the same technical precision in any shipyard or marina globally.

**We are your trusted partner for high performance and aesthetic excellence.**

# Global Footprint: Where the Luxury Fleet Demands Precision

Our operating model is designed for seamless **global mobility**. With a presence and strategic collaborators in Spain, France, Italy, Greece, United States... we ensure a rapid response and the **immediate deployment of our certified technical teams to any shipyard or marina worldwide.**

**Marine Wrapping International LLC** expertise spans the most demanding markets: from the busy waters of the Mediterranean and the Caribbean to the maritime routes of Northern Europe and the Persian Gulf.

We have forged long-term strategic collaborations with shipyards (new build and refit), high-level brokers, captains, and project managers, understanding the logistical and timing complexities required by the superyacht industry.

Our promise is an on-site technical execution that reflects the highest European and American quality standards.

**For us, global reach is not just where we can work, but how we maintain excellence at every one of those locations.**

# Global Reach: Strategic Presence in Key Marine Hubs

*US - St. Petersburg (Florida)*

*ES - Barcelona*

*FR - Cannes*

*MC - Monaco*

*IT - Genoa*

*GR - Athens*

*TR - Istanbul*

*EA - Dubai*

# Nautical Wrapping: The Strategic Evolution of Refitting

Nautical wrapping, executed by specialists, is the modern, rapid, and fiscally efficient replacement for traditional repainting, aligning with the luxury fleet's demand for minimized downtime. We offer a comprehensive refitting solution that allows for the aesthetic and functional modification of hulls, superstructures, and interior spaces with unmatched precision.

## Value Analysis and Operational Benefit:

- **Critical Downtime Reduction:** We drastically reduce vessel immobilization time in the shipyard, allowing shipyards to optimize their seasonal projects and owners to maximize yacht usage time.
- **Capital Efficiency:** The initial investment cost is significantly more competitive than the multi-layer repainting process, offering a high aesthetic return on investment.
- **Maximum Protection:** Acts as a sacrificial layer, offering superior defense against intense UV rays, saline corrosion, chemical wear, and micro-abrasion.
- **Advanced Surface Protection:** We include the application of PPF (Paint Protection Film) or MPF (Marine Protection Film)
- **Energy Efficiency:** Installation of solar film that minimizes heat transfer, reducing the load on air conditioning and energy consumption on board.
- **Flexibility and Reversibility:** The film is fully reversible, allowing return to the original surface (without damage devaluation) and facilitating a change of look for charters or new sales.
- **Unlimited Customization:** Access to an exclusive range of finishes including metallics, deep satins, mirror gloss, and textures.
- **Optimized Maintenance:** Easy cleaning and the possibility of fast, affordable localized repairs in case of minor damage.

# The Foundation of Perfection: Technical Preparation for Exterior Finishes

The durability and flawless finish of high-performance wrapping depend entirely on the quality of the underlying substrate. Marine Wrapping International LLC provides a comprehensive surface remediation and repair service, ensuring perfect adhesion, longevity, and aesthetics on hulls and superstructures for every project.

## Essential Process for Exterior Surfaces

- **FRP Diagnosis and Repair:** We correct minor fissures, small delaminations, and impact damage on fiberglass using marine-grade resins and composite materials, restoring surface integrity and uniformity.
- **Paint and Gelcoat Correction:** We utilize polyester and epoxy fillers, combined with multi-stage precision sanding, to level, smooth, and eliminate wear, scratches, and minor indentations.
- **Preparation for Mirror Finish:** Total smoothing is key. The surface is meticulously treated to eliminate any imperfections that could "print through" the vinyl film.
- **Technical Decontamination:** We apply a rigorous cleaning process using specialized degreasers and decontamination agents to ensure optimal molecular adhesion of the vinyl, which is essential for the durability of the wrapping or PPF.

## Strategic Benefit

By integrating repair into our wrapping process, we simplify project management for shipyards, guarantee the quality of the base from a single source, and contribute to the crucial reduction of the yacht's downtime.

**EXTERIOR HULL REPAIRS**

# The Aesthetic Shield: Exterior Protection and Performance

The exterior not only defines a yacht's image; it is the defensive layer that withstands extreme ocean conditions. Our exterior wrapping services are meticulously designed to elevate aesthetics and, most importantly, prolong the lifespan of the original paint and gelcoat.

Key Services and Technical Applications:

- **Comprehensive Hull and Superstructure Wrapping:** Application of nautical-grade vinyls with a guarantee of durability against UV degradation and salinity.
- **PPF (Paint Protection Film) Installation:** High-performance PPF is essential for protecting critical areas (bow, waterline, platforms) against abrasion, stone impact, and fuel stains. Available in high-gloss, matte, or satin finishes.
- **Sailboat Refit and Components:** Specialized wrapping of masts, booms, and technical parts on sailing yachts, using materials that reduce visual weight and offer superior resistance.
- **Brand and Aesthetic Customization:** Design and installation of the yacht's identity: 3D transom names, logos, and brand details in premium finishes (chrome vinyl, metallics).
- **Visual Engineering Solutions:** Integration of backlit vinyls or colour and texture solutions on decks, flybridges, and technical zones, always with materials certified for the marine environment.
- **Detailed Project Management:** We adapt the intervention (total or partial wrapping) to the exact timing of the shipyard or the owner's downtime window.

# Fast, Clean Interior Restyling: Luxury Without Major Construction

Yacht interiors require a renovation solution that is aesthetically disruptive but not operationally disruptive. Refitting with architectural films is the superior alternative to traditional joinery or painting, ideal for high-end refits that cannot afford the dust, fumes, or extended downtime.

Advantages of Interior Refitting with Films:

- : **Stealth Execution:** Rapid interventions, without generating dust or odors, allowing renovations in port or even during charter periods with minimal disruption to the crew.
- : **High-Impact Aesthetics:** We transform worn or outdated surfaces (panels, fixed furniture, ceilings) with the look of premium materials: exotic woods, marbles, brushed metals, or textile textures, at a fraction of the cost and weight.
- : **Modular Applications:**
  - \* **Cabins and Passenger Areas:** Complete renovation of staterooms, bedheads, and bathrooms.
  - \* **Service Areas:** Wrapping of galleys, crew areas, and laundries with high-resistance, easy-to-clean sanitary vinyls.
  - \* **Furniture and Technical Surfaces:** Wrapping of countertops, doors, and cabinets, ensuring durability in the high-humidity marine environment.
- : **Bespoke Customization:** We work with designers and project managers to create tailored solutions, including the application of 3D panels, personalized vinyls, or unique effects.

# INTERIOR YACHT WRAPPING

*From classic to contemporary, we restyle all yacht and superyacht interiors to your precise taste.*

# Luxury Without Major Construction: Comprehensive Interior Substrate Preparation

Interior renovation on yachts demands specialized attention to substrate preparation.

Our luxury finishes are only as good as the base surface. Therefore, we offer a complete interior remediation and repair service, ensuring a perfect environment for aesthetic transformation.

## Specific Interior Remediation

- **Wood and Panel Repair:** We remediate and repair minor structural damage to fixed furniture, doors, cabinets, and wood panels. We use specialized fillers and putties to restore surface uniformity.
- **Substrate Leveling:** We correct warped panels, misaligned joints, and chipped corners through fine filling and precision sanding. This precision is vital, as interior vinyls amplify any surface defects.
- **High-Risk Substrate Preparation:** We are experts in preparing metals, plastics, and composites. In high-humidity areas (galleys/heads), we apply primers and sealants to prevent moisture ingress and delamination.
- **Element Replacement:** We manage the removal and replacement of critical elements such as damaged mirrors and the application of fresh marine-grade silicone sealing in high-humidity zones.

## The "All-in-One" Solution

Our comprehensive approach to interior preparation eliminates the need for multiple contractors (joiners, painters), simplifying management for the captain/manager. We offer a single point of responsibility, guaranteeing that the base preparation leads to a flawless final finish and a fast, clean renovation without the odors associated with traditional refitting.

**INTERIOR REPAIRS**

# Film Technology: Marine-Certified Materials

The quality of our work begins with the quality of the material. Marine Wrapping International exclusively uses films from the leading international brands, which are not only certified for nautical use but have demonstrated superior long-term performance in adverse weather conditions.

Our Material Standards:

- **Durability and Resistance:** High-performance cast vinyls, formulated to resist intense UV radiation, saline corrosion, seawater, chemicals, and micro-mechanical abrasion.
- **Adhesion Technology:** We use specialized adhesives with air-release technology, which guarantees a bubble-free application and a clean, safe removal without damaging the original substrate.
- **Exclusive Finishes for Refitting:**
  - \* Colour Finishes: Extensive library of colours in High Gloss (mirror), Deep Matte, and Satin.
  - \* Premium Effects: Metallic, Iridescent (Pearlescent), and Textured Vinyls (3D Carbon Fiber, Luxury Woods, Leather, etc.).
  - \* Marine Grade PPF: Thermoplastic Polyurethane (TPU) films with self-healing properties against minor scratches.
- **Functional Laminates:** Solutions such as solar film (thermal and UV control), which reduces energy consumption on board, and safety films.

# MARINE CERTIFIED MATERIALS

# The Certified Process: Technical Rigor and Global Guarantee

Our work methodology is standardized to replicate the highest quality in any location, minimizing risk and shipyard time. The process is managed by an assigned Project Manager, ensuring fluid communication with the shipyard or captain.

## 5-Stage Methodology (Guarantee of Excellence):

- **Strategic and Technical Consulting:** Evaluation of the existing substrate (paint/gelcoat), analysis of technical feasibility, and material proposal (PPF or vinyl) according to yacht usage and budget.
- **Design and Logistics Planning:** Creation of the visual proposal (renders), precise digital measurement, and development of the work plan and material logistics, always aligned with the downtime window.
- **Technical Surface Preparation:** The most critical stage. Includes paint surface remediation, deep cleaning (degreasing and decontamination), and minor defect correction to ensure perfect adhesion.
- **Certified Application:** On-site execution by our own team. Installation with precision tools, ensuring correct material tension and edge sealing for maximum durability in the marine environment.
- **Quality Control (QC) and Certification:** Exhaustive final inspection of every millimeter of the application. The project completion certificate and care guidelines are issued.

**Marine Wrapping Guarantee:** All our work is backed by an international guarantee covering both material durability (provided by leading manufacturers) and installation quality (provided by Marine Wrapping International LLC).

# Absolute Confidentiality: The Commitment to the Luxury Fleet

We understand that discretion and information security are paramount in the superyacht sector. Confidentiality is a fundamental pillar of our global operation and applies at all levels: from the design and materials chosen to the work location and downtime dates.

## Discretion and Security Protocol:

- **Strict NDA Agreements:** We are prepared to sign Non-Disclosure Agreements (NDAs) with shipyards, fleet managers, and owners, guaranteeing the protection of the yacht's image and client information.
- **Image Usage:** We photographically document all our projects as part of our internal quality control and records. However, these images are not published on our website or social media, unless explicitly and previously agreed upon with the client. We strictly respect their privacy and the agreed terms.
- **Track Record Samples:** Our experience showcase is limited to presenting collaborations with globally recognized yachts (on this page), always respecting NDA terms for the specific work performed. This is our guarantee that your information and asset are protected.
